CONFIDENTIAL

No. 725

Subject: East-West Trade

Reference: 470211

The Honorable

The Secretary of State

Washington, D. C.

Sir:

I have the honor to enclose herewith the preliminary export and import plans of Czechoslovakia for the month of November, 1948, which were obtained from a source within the Ministry of Foreign Trade and are believed to be authentic.

Perusal of the planned trade of Czechoslovakia during this period emphasizes its varied composition, its continuing dependence upon areas outside the USSR and the Soviet orbit, and furnishes some indication of the relative importance of the various trade partners of Czechoslovakia including those in Western Europe.

It should be pointed out that Czechoslovakia, during November, 1948, contemplates the importation of 400 tons of aviation gasoline via Hamburg from the "RAF warehouse" and 200 tons of aviation oil from The Netherlands, which may impinge upon the present United States aviation policy toward the USSR and the Soviet satellites. Other items of interest which Czechoslovakia has planned to import during the present month of November are: natural rubber, 500 tons from Malaya, 100 tons from England (via Hamburg) and 100 tons from Nigeria (via Dutch ports); copper, 200 tons from Norway, 350 tons from Canada, 900 tons from Belgium and 200 tons from Mexico; crude oil, 18,000 tons from Iran and 5,000 tons from Rumania; aluminum, 60 tons from Switzerland; 4,000 tons of petroleum distillate products and 6,000 tons of mineral oil distillate products from Austria; and 100 tons of zinc bands, 100 tons of zinc alloy and 1,240 tons of zinc from Poland. Unfortunately more detailed descriptions of commodities to be exported and imported are not available.

With regard to the ability of Czechoslovakia to obtain commodities denied to it by the operation of the United States export license system, a Czechoslovak importer has observed that, with the exception of goods in short supply (he cited carbon black as an example) and specially designed equipment and machinery, nearly all goods denied export licenses directly from the United States are obtainable indirectly on the world markets for dollars, even though at increased prices. He cited intermediary countries as Switzerland, Portugal, Netherlands, Belgium and Sweden. He further stated that for a short time after March 1, 1948 it was difficult to arrange for delivery of these goods for which United States export licenses had been refused, but that at the present time channels

have been

have been established which make possible the securing of most needed goods for Czech industry. The source was pressed to be more specific in his observations but either could not or would not do so. In this connection the passage of the new Czechoslovak law for the protection of the State seems to have some inhibiting influence upon sources of information and probably will make the securing of confidential information regarding the evasion of the United States export license regulations increasingly more difficult.

Being essentially a manufacturing and trading nation, Czechoslovakia has a large stake in the maintenance and increase of East-West trading. Czechoslovakia differs from the usual economic pattern of Soviet satellite, being highly industrialized and is itself a net importer of foodstuffs. Despite an increasing orientation of Czechoslovak foreign trade toward the USSR and other Soviet satellites within the past year all official pronouncements, including the statement of the Czechoslovak Foreign Minister at Paris on November 4, 1948, stress the desire for increased trade with Western Europe.

Respectfully submitted,

James K. Penfield
Charge d'Affaires, a.i.

550.
